SECTION 02

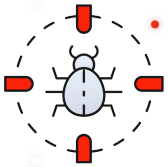
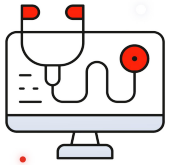
Solutions Overview

Let's Hunt For Cyber Threats

Rather than taking a responsive approach to cybersecurity and waiting for an attacker to make their move, threat hunting turns the tables around. By proactively probing networks in a systematic and consistent way, cyber threats that evade existing security measures can be detected and isolated.



Threat Hunting & Alerting

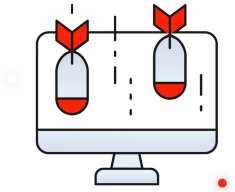


Threat Mitigation

Expert Led Response

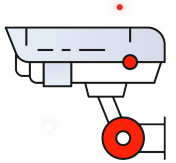
Let's Secure Your Databases

Vulnerable databases expose organisations to a variety of risks and threats, the volume of information they hold make them the main source of data breaches. With databases often a single point-of-failure for organisations, their security should be at the core of every business's security strategy.



Reduce The Attack Surface

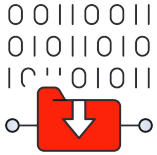
Database Defense



Continuous Monitoring

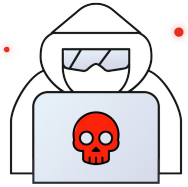
Let's Secure & Protect Your Applications

Software applications are now central to both an organisation's internal operations and their interactions with customers. The security and integrity of an organisation's applications is therefore now a strategic issue for the majority of businesses and this challenge has intensified in recent years.



Application Code Review

Application Security Testing



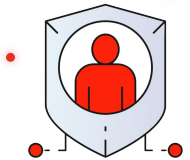
Hacker Proofing

Let’s Expand Your Security Team

The recruitment, training and retaining of security personnel represents one of the most significant security challenges facing businesses today. Many organisations are now turning to flexible, temporary and contract staffing models as a way to overcome the cyber security skills shortage.

Flexible Staffing

Experienced Professionals



Bypass Skill Shortage

Let’s Train Your Employees

The constantly changing nature of the cyber threat landscape means security teams must regularly update their skills and knowledge. This makes training an essential component in creating a dynamic approach to security. We create specialist training programs for your security teams.

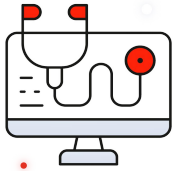
SECTION 03

Services Overview

Penetration Testing

Penetration testing assesses an organization's defenses by simulating an attack on their network. By identifying existing vulnerabilities and how an attacker would exploit them, organizations are empowered to proactively mitigate their security flaws, enhancing their overall cybersecurity posture.

Threat Hunting & Alerting



Threat Mitigation

Expert Led Response

Managed Security Services

Protecting an organisation from cyber attack requires a long list of security processes that can overwhelm even the largest organisations. Building the internal capability to deliver an effective cybersecurity team also involves significant costs and resources. ITSEC offers a solution to this problem.

Cost Effective

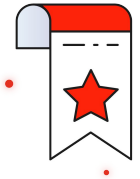
Access To
Expertise

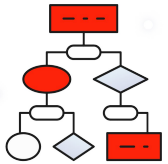


Qualified &
Accredited

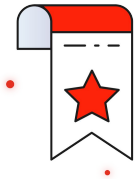
Information Security Analysis

A comprehensive analysis of your cybersecurity posture. A wide ranging scope that includes a review of your policies and operating procedures around incident management, business continuity and disaster recovery, helping you fine-tune your strategy and optimise security measures.

Business Continuity



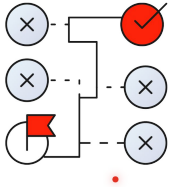
Strategic Alignment



Industry Best-Practice

Architecture & Process Development

A collection of methods that help organisations integrate security into their digital infrastructure. Modern businesses are increasingly embracing a variety of new technologies as they continue their digital transformation. This opens up a host of new opportunities, but also presents new risks.



Managing Complexity

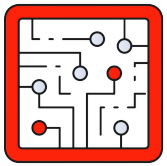
Risk Based Approach

Robust Security Processes

Digital Forensic and Incident Response (DFIR)

Works directly with organisations to investigate and respond to cyber attacks on their network. A DFIR capability is becoming an increasingly important component for organisations seeking to contain incidents as quickly as possible and prevent a cyber attack becoming a cyber crisis.

Instant Response

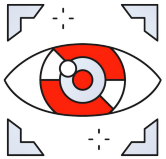


Attacks Contained

Incident Investigation

Cybersecurity Operations Center (CSOC)

Our 24/7/365 CSOC provides an essential function in monitoring and detecting any threatening event that is critical to an organisation's security and acting as an extension of their own security team. Our CSOC team cuts through the noise to deliver security-critical situational awareness.



Constant Monitoring
